

Snow squarestem

(*Melanthera nivea*)

For definitions of botanical terms, visit en.wikipedia.org/wiki/Glossary_of_botanical_terms.

Snow squarestem is a robust bushy wildflower that occurs naturally in dry to moist flatwoods, prairies and disturbed open habitats. It typically blooms summer through early winter, but can bloom year-round, attracting bees, butterflies and other pollinators. It's also known as Cat's tongue, Salt and pepper and Nonpareil.

Its flowers have no ray florets. Disk florets are tiny, tubular and white with visible black anthers. The florets are assembled into a dense, showy flowerhead that is held by rough hairy bracts. Leaves are petiolate and arrow-shaped with toothed or entire margins. They are oppositely arranged, and their surface is coarse. As the common name suggests, the densely branched stems are square. Seeds are borne in inconspicuous achenes.

The genus name *Melanthera* is from the Greek *melanós*, or “black” and *ánthos* (or *anthērós*) meaning “flower,” referring to the prominent black anthers. (The word “anther” is derived from the Greek *anthērós*). The species epithet *nivea* is from the Latin *nivis*, meaning “snow.”

Family: Asteraceae (Aster, composite or daisy family)

Native range: Nearly throughout Florida

Garden Tips: Snow squarestem is a fast-growing plant that is adaptable to a variety of conditions. It is best suited for naturalistic landscapes and habitat restorations, but can be used in butterfly and wildflower gardens. In more formal settings, it may require regular pruning and removal of spent plants. Snow squarestem is a moderate self-seeder. It dies back in the winter.

Snow squarestem seeds are available through the Florida Wildflowers Growers Cooperative. Plants are often available from nurseries that specialize in Florida native plants. Visit www.PlantRealFlorida.org to find a nursery in your area.
