St. John's wort is an evergreen shrub known for its outstanding ornamental features. Thirty-four species are found in Florida. All are native, and several are on state and federal endangered plant lists. Atlantic St. John's wort is the most typical species encountered at native plant nurseries and plant sales. It occurs naturally in scrub, pine flatwoods, sandhills and coastal swales. Its many golden flowers bloom in the summer, attracting a host of native bees and other pollinators.
