

Sweet pinxter azalea

(*Rhododendron canescens*)

For definitions of botanical terms, visit en.wikipedia.org/wiki/Glossary_of_botanical_terms.

Sweet pinxter azalea, also known as mountain azalea, is a deciduous flowering shrub. Its showy pinkish- to rose-colored flowers are trumpet-shaped with noticeably protruding stamens and pistils. They are borne around the same time that the first leaves appear and are particularly fragrant. Leaves are obovate, hairy and alternately arranged.

Sweet pinxter azalea blooms in spring and occurs naturally in pine flatwoods, mesic hammocks, bay swamps, and floodplain and slope forests. It attracts a number of pollinators, including hummingbirds.

Family: Ericaceae (Heath family)

Native range: Panhandle, Northern peninsula

To see where natural populations of Sweet pinxter azalea have been vouchered, visit www.florida.plantatlas.usf.edu.

Lifespan: Perennial

Soil: Rich, acidic soils

Exposure: Full sun to partial shade

Growth habit: up to 15' tall

Propagation: Seed, division

Florida regions of landscape suitability: North

Garden tips: Sweet pinxter azalea works well as a specimen plant, in a mass planting or naturalistic landscape, and in containers. Young plants may appear straggly but will fill in and spread out as they mature.

Sweet pinxter azalea is available from nurseries that specialize in Florida native plants. Visit www.PlantRealFlorida.org to find a nursery in your area.
