

# White stopper

(*Eugenia axillaris*)

For definitions of botanical terms, visit [en.wikipedia.org/wiki/Glossary\\_of\\_botanical\\_terms](http://en.wikipedia.org/wiki/Glossary_of_botanical_terms).

White stopper is an evergreen shrub or small tree found in coastal hammocks, strands and shell mounds in Florida's central and southern peninsula. Its fragrant flowers bloom year-round, with peak blooming in spring and summer, attracting many types of pollinators. Fruits generally form in fall and may persist several months. They are eaten by birds and wildlife. Humans can eat them, too – the flesh is quite sweet when ripe, but eating the bitter seeds is not recommended.

White stopper's flowers are four-petaled with many obvious stamens, which give them a frilly appearance. They are born in axillary clusters. Leaves are elliptic to ovate, dark green on top and pale underneath, with entire margins and reddish petioles. Young leaves may be pinkish or red. Mature leaves may be studded with black dots. Leaf arrangement is opposite. Trunk is smooth with light grayish to whitish bark. Fruits are round, medium-sized (about ½-inch in diameter) fleshy berries. Immature fruits are green; mature fruit varies from red to purplish-black.

The common name "stopper" alludes to the plant's historical use as a treatment for diarrhea.

**Family:** Myrtaceae (Myrtle or eucalyptus family)

**Native range:** Central and southern peninsula into the Keys

*To see where natural populations of White stopper have been vouchered, visit [www.florida.plantatlas.usf.edu](http://www.florida.plantatlas.usf.edu).*

**Lifespan:** Perennial

**Soil:** Moist, well-drained calcareous, loamy or sandy soils

**Exposure:** Full sun to partial shade

**Growth habit:** 15'+ tall

**Propagation:** Seed

**Florida regions of landscape suitability:** Central, South

**Garden tips:** White stopper is an attractive addition to a variety of landscapes. Its copious blooms are striking against its dark green leaves. The plant's dense foliage and ability to be pruned into any desired shape make it a good option for a hedge or buffer. Individual specimens are typically symmetrical and work well in formal settings. Once established, White stopper generally requires little to no maintenance.

White stopper is available from nurseries that specialize in Florida native plants. Visit [www.PlantRealFlorida.org](http://www.PlantRealFlorida.org) to find a nursery in your area.
